EDUCATION

Grambling State University

B.Sc. in Computer Science

Grambling, LA

Expected Dec. 2027

- **GPA:** 3.93 | President's List | Honors College
- **Availability:** Summer 2027 (May 10 – Aug. 13)
- **Relevant Coursework:** Data Structures & Algorithms, Probability & Statistics I and II, Linear Algebra

EXPERIENCE

UX Design Intern

Summer 2026

Tiffany & Co.

New York, NY

- Owned end-to-end design of a saved-items and comparison experience, triangulating behavioral analytics, consumer research, client segmentation, and in-store observation to reframe a solution-shaped brief into an open question about customer behavior
- Designed and fielded a ten-question survey to a screened panel of recent luxury jewelry buyers, severity-ranked the export into locked interface decisions, and established the higher unmet need
- Specified interaction behavior, modal and empty states, and page copy inside an enterprise design system, conveying action hierarchy through control type, size, and position

Design Technologist

Spring 2026

Ford × BVCC Studios

- Built the first interactive frontend prototype for a research-tooling concept targeting a data-dense synthesis workflow, setting the interaction blueprint the visual designer iterated on
- Ran concept validation interviews with lead UX researchers and a global communications lead, testing proposed features against enterprise constraints on data anonymization and PII
- Produced the video simulation used to pitch a reporting format selected at final gate review, and enforced a 48 to 60 pixel minimum touch target across every dashboard

Frontend Developer Intern

Summer 2025

CORE Futures Lab

- Designed and implemented screens in Flutter for a two-app speech therapy platform serving children and clinicians
- Redesigned and shipped authentication across both apps for every entry path, and implemented gamified video capture by extending a camera library to place custom controls against the designs
- Engineered deterministic voice playback from pre-generated clone audio under rule-based flow control, removing hallucination risk from a pediatric therapy context

PROJECTS

ClassSync | *Swift, SwiftUI, MVVM, Firebase*

[Link](#)

- Led a student engineering team building an iOS attendance app for the Apple HBCU C2 showcase, designing every screen and building them out in SwiftUI while teammates wrote the feature logic behind them

MatchLens | *React, Vite, Tailwind, Express, PostgreSQL*

[Link](#)

- Frontend lead on a football analytics web platform shipped in five weeks by a team of six, building team following, notifications, the fixture calendar, and the home screen
- Replaced the wireframed top navigation with a sidebar and defended the decision in review, after which the team adopted the pattern as its standard

Multilingual LLM Evaluation and RAG System | *React, FastAPI, ChromaDB, Python*

[Link](#)

- Resolved cross-repository technical conflicts and undefined project scope with Anote AI's founder, redirecting the RAG interface from a standalone page to a dashboard with language-specific model loading
- Built the user-facing React interface end-to-end using AI-assisted development, and benchmarked four AI providers across four languages on BLEU and BERTScore

SKILLS & LEADERSHIP

Design: Figma, FigJam, Prototyping, Design Systems, Interaction and Visual Design, Information Architecture, UX Writing

Research: Survey Design and Fielding, Competitive Audits, Contextual Inquiry, Stakeholder Interviews, Qualtrics

AI Tools: Figma Make, Claude Code, Cursor, Codex, Vercel v0, Google Labs (Stitch, Flow)

Frontend: React, JavaScript, HTML/CSS, Tailwind, Vite, Swift/SwiftUI, Flutter/Dart

Backend & Data: Python, SQL, FastAPI, Node/Express, PostgreSQL, Firebase, Supabase, Git
